

TELEMEDICINE COVID-19 ACTIVITY

Supported the Virtual Care Surge

With the onset of the COVID-19 pandemic, there was a global awakening to the potential of telemedicine and virtual care solutions, to address the need to continue providing health care services. When the emergency measures were introduced by the Province in mid-March 2020, Unity Health had already mobilized, combining the talents, expertise and resources of the Telemedicine program, Information Technology department, and leaders across the organization to address the urgent need to continue offering clinical services while limiting the spread of the virus. Unity's virtual clinical visits through OTN alone increased more than 200% between April and June 2020.

Virtual Clinical Visits Via OTN

Trained Staff & Physicians on Virtual Care and Education Best Practices
