

Patient Identification – It Takes Two

Patient identification bracelets allow us to identify the **correct** patient for the **correct** care

How you can help:

- Make sure you are wearing your patient identification bracelet at all times.
- If you do not have an identification bracelet, let us know right away.
- We will confirm your identity with at least two things about yourself, including: your first and last name, date of birth, or health card number.
- We will check your identification bracelet before we give you a test, treatment or medication. Let us know if this does not happen.
